Hands on Help - Windows, Linux and Chromebooks

Please wear your Name Tag.

When you're setting up your new PC, this experience is designed to transfer your important data from your previous PC to your new one.

This means you can start using your new PC with all your files, settings, and preferences intact.

What is transferred?

During the transfer process, the following is copied:

All files: Your documents, photos, videos, and other files saved across folders or drives are transferred to your new PC.

Settings and preferences: This includes your wallpaper, themes, and other personalization settings.

What isn't transferred?

System and OS files like Program Files, Program Data, Temp, etc. are automatically excluded from the transfer.

OneDrive files won't be transferred. Sign in to OneDrive on your new PC to access them.

Applications installed on your previous PC.

Saved Passwords and sign-in credentials.

Drives encrypted with BitLocker. To include data from such drives, please decrypt them before starting the transfer.

Step 1: Prepare the previous PC

Make sure both your PCs are connected to the same Wi-Fi or LAN network.

Plug in both the PCs to a power source throughout the transfer process to avoid interruptions.

Ensure your previous PC is up to date with the latest cumulative updates for Windows 10 or Windows 11.

Open the Windows Backup app.

In the Windows Backup app, select Transfer information to a new PC to begin pairing.

Step 2: Pair the devices

In the Windows Backup app on your previous PC, you'll see the PC's name that you must enter on the new PC.

Step 3: Select what to transfer

A list of files and folders available for transfer appears. Use the drop-down menu to adjust your selection and choose the items to bring over.

Note If the new PC has less storage space than the previous one, some files or folders must be deselected to fit within the available space before proceeding.

VLC Media Player is not a full video editor, but it does include hidden basic tools to cut, crop, rotate, and record video clips on your computer for free.

How to Cut and Trim Videos.

Open VLC Media Player and go to the top menu.

Click View and select Advanced Controls.

Four new buttons appear above the play bar at the bottom left.

Move the timeline slider to your start point.

Press the red Record button and hit Play.

Play until your end point, then press Record again to save the clip automatically to your computer's Videos folder.

How to Rotate and Crop

Click Tools in the top menu and select Effects and Filters.

Go to the Video Effects tab and choose Geometry to rotate the video by 90 or 180 degrees.

Save before closing the window.

From Peter [Benefits of Books reading](#)

If you receive a threatening phone call, hang up immediately. Do not disclose personal details to the caller.

Never provide your personal or banking details to a person who calls you.

Never provide your financial PIN or account passwords to anyone.

Do not make any payments to the caller, either via phone, internet, or cash.

If you are suspicious about the credentials of a person on the phone, ask questions of them.

If they avoid answering or refuse to provide information, hang up.

Don't let scammers pressure you – scammers use detailed scripts to convince you that they're the real deal and create a high-pressure situation to make a decision on the spot.

If you think you have provided your account details to a scammer, contact your bank or financial institution immediately.

Contact police immediately to report the incident.

Treat every email as suspicious.
